BANDARU SRINIVASU

Andhra Pradesh | bandarusrinivasu35@gmail.com | +91-9390714882 | linkedin.com/in/vasubandaru | github.com/vasu-9390

PROFESSIONAL SUMMARY

Results-driven Full Stack Developer with hands-on experience designing and shipping end-to-end web applications across React.js, Node.js, PHP, Java, and MongoDB/MySQL/SQL databases. Proven track record building secure, role-based systems, RESTful APIs, and AI-powered backends that integrate LLM APIs into production workflows. Skilled at translating business requirements into scalable architecture — from autonomous GST reconciliation to 24/7 AI customer support — while maintaining strong fundamentals in Data Structures and Algorithms. Known for writing clean, maintainable code, working across the full stack independently, and delivering polished user experiences that drive measurable engagement.

EXPERIENCE

Frontend Web Developer Intern — DevGnan, Hyderabad June 2025 – Sept 2025

- Developed responsive web applications using React.js and JavaScript across 15+ application routes.
- Built reusable UI components to improve development speed and maintainability.
- Implemented Redux Toolkit for scalable state management.
- Designed modern interfaces using Tailwind CSS and Material UI, improving user engagement by 25%.

PROJECTS

Autonomous GST Reconciliation — Node.js, Express.js, MongoDB, LLM APIs, React.js

- Built an autonomous GST reconciliation system that matches purchase records against GSTR-2A/2B data, flagging mismatches in invoice numbers, amounts, GSTIN, and tax values.
- Used LLM APIs to interpret discrepancies, classify mismatch causes, and suggest corrective actions, reducing manual accounting effort.
- Designed a modular Controller-Service backend with validation, error handling, logging, and MongoDB persistence for audit-ready reconciliation reports.
- Created a dashboard to upload data, review matched/unmatched invoices, and export reconciliation summaries.

AI Customer Support That Works 24/7 — Node.js, Express.js, MongoDB, LLM APIs, React.js

- Developed an AI-powered customer support assistant that handles customer queries around the clock with context-aware, accurate responses.
- Integrated LLM APIs with a knowledge base and conversation memory to resolve common queries instantly and escalate complex issues to human agents.
- Built REST APIs and a real-time chat interface with conversation history, session management, and MongoDB storage.
- Implemented error handling, logging, and fallback flows to keep the system reliable for production use.

AI-Powered Product Categorization & SEO Tagging System — Node.js, Express.js, MongoDB, LLM APIs

- Built a production-ready AI backend using LLM APIs to auto-generate product categories, SEO tags, and sustainability attributes (compostable, vegan, recyclable).
- Implemented modular Controller-Service architecture with error handling, logging, and MongoDB persistence, optimized for scalable commerce platforms.

SKILLS

Languages: JavaScript, TypeScript, Python, Java, SQL
Frontend: React, Next.js, HTML5, CSS, Bootstrap, Tailwind CSS, UI/UX
Backend: Node.js, Express, Django, SAP, PHP
Databases: MongoDB, PostgreSQL, MySQL, SQL
DevOps: GitHub, Docker
Tools: Git, Postman, PHPMailer, FPDF
Problem Solving: LeetCode – 200+ problems solved

EDUCATION

B.Tech in Computer Science and Engineering — PP Savani University 2023 – 2027

TECHNICAL STRENGTHS

- Strong understanding of Data Structures and Algorithms.
- Experience building REST APIs and backend systems.
- Knowledge of SQL/NoSQL databases and basic system design.
- Good communication and ability to explain technical concepts.

CERTIFICATIONS

- AWS Certified Developer.
- Full Stack Web Development – Coursera.
- MySQL – IBM.
